IDENTIFIERS *Indiana

ABSTRACT

Presented are 19 tables of statistical data on prevalence of mental retariation, and services provided the estimated 158,724 mentally retarded (MR) persons in Indiana through 1973 by special education classes, vocational rehabilitation units, local organizations, and state hospitals and training centers. Given in tables 1 through 8 are data on prevalence by county, age group, and degree of retardation. It is noted that prevalence data may vary due to local circumstances such as cultural deprivation and frequency of marriage among relatives. Data provided in tables 9 through 12 give information such as 36 percent an estimated 43,699 of the school aged educable mentally retarded (EMR) were in public school classes in 1972-1973 (remaining EMR students were thought to be in regular classes); and 77 percent of the school aged trainable mentally retarded were in public school classes for trainables. In table 13 data is given to show findings such as approximately 21.4 percent of the caseload of the Indiana Vocational Rehabilitation Services in 1973 involved the mentally retarded. Tables 14 through 16 give data on funding for local state programs by the Mental Retardation Division of the Indiana Mental Health Department, funding for county services derived through permissive taxation legislation, and funding of local services through United Fund. In tables 17 through 19 the numbers of MR individuals in state hospitals and training centers are identified by enrollment, movement such as transfers, and county of residence. (MC)

TABLE XIX - ENROLLMENT BY COUNTY OF PATIENTS IN INDIANA STATE HOSPITALS ON JUNE 30, 1973 75

FOREWORD

By

Frank E. Ball, Executive Director
Indiana Association for Retarded Children

A mentally retarded individual is not a "statistic" - he is a person. One cannot say that any two mentally retarded individuals are alike any more than one can say that any two non-retarded individuals (apart from identical twins) are alike. The personalities, emotional makeup, needs, capabilities, home environments, and life objectives of each one of us are individually determined and distinctive.

Even when this is affirmed, there is an urgent need to appreciate the scope of the problem of mental retardation for those whose normal mental growth was arrested at some time before birth, during the birth process or in the early years. In scientific terms, "Mental retardation refers to subaverage intellectual functioning which originates during the developmental period and is associated with impairment in adaptive behavior."

This publication attempts to bring the estimates of experts, as well as actual head counts and program reviews, to those working in our State and in our Counties as community leaders, program planners, legislators, and the interested and involved citizen.

In this current publication, we have based our material on 1972 population estimates established by the U. S. Department of Commerce, Social and Economic Statistics Administration, and official information released by the Indiana State Board of Health, the Indiana Department of Public Instruction, Indiana Vocational Rehabilitation Services, the Indiana Department of Mental Health and local county groups serving the mentally retarded throughout the State of Indiana.

PREVALENCE OF MENTAL RETARDATION
(TABLES I THROUGH VIII)

The figure most commonly cited in regards to the incidence of mental retardation, and that based on expert opinion, is 3% of the total population. This percentage is used by The President's Committee on Mental Retardation, the National Association for Retarded Children, the Indiana Department of Mental Health, the fourteen Mental Retardation Planning Committees of the State of Indiana, and many others. This would indicate that there are approximately 158,724 mentally retarded citizens in Indiana on the basis of 1972 population estimates.

Similar expert opinion divides the degree of mental retardation among the retarded population as follows: 89% "Educable"; 6% "Trainable"; 3½% "Severely Retarded"; and 1½% "Profoundly Retarded". The characteristics of these four groups are presented in the tables by age groupings of: Under 5, 5 to 19, and 19 and Over; as well as by degree of mental retardation.

The use of data on estimated prevalence of mental retardation must take into account these two important factors:

a. The actual incidence will be greater or lesser in direct proportion to those local circumstances which create or help prevent mental retardation. For instance, in poor and culturally deprived areas, in populations where marriage between near relatives is frequent, or in a region which has been through an epidemic which adversely affects unborn or young children, we would expect that the prevalence of mental retardation would be greater than that we have predicted here on the basis of "average national" prevalence.

b. The number of estimated mentally retarded must not be confused with the need for services. In the pre-school group and in the adult group, for instance, we might expect to find about one-third actually identified as mentally retarded and in need of special services. Of school-aged groups, on the other hand, we might see more than the estimated 3% in need of special services.

   This seeming inconsistency with a more or less stable rate of estimated prevalence is understandable when we reflect upon the fact that it is in the school years when we give the most attention to the intellectual development (or lack of development) to our children. Pre-school children who are mildly mentally retarded may not be recognized as such until they start their formal school training, when their deficiencies become apparent. Again, in the post-school years, many of the mildly retarded, under less pressure for intellectual attainment and more or less adapted to their role in society, perhaps in more menial types of labor, may "merge" with the rest of the population and not be identified as being "mentally retarded".

Developmental Characteristics of the Mentally Retarded

Degrees of Mental Retardation	Pre-School Age 0-5 Maturation and Development	School Age 6-20 Training and Education	Adult 21 and Over Social and Vocational Adequacy
EDUCABLE			
Mild	Can develop social and communication skills; minimal retardation in sensorimotor areas; often not distinguished from normal until later age.	Can learn academic skills up to approximately sixth grade level by late teens. Can be guided toward social conformity. "Educable"	Can usually achieve social and vocational skills adequate to minimum self-support but may need guidance and assistance when under unusual social or economic stress.
TRAINABLE			
Moderate	Can talk or learn to communicate; poor social awareness; fair motor development; profits from training in self-help; can be managed with moderate supervision.	Can profit from training in social and occupational skills; unlikely to progress beyond second grade level in academic subjects; may learn to travel alone in familiar places.	May achieve self-maintenance in unskilled or semi-skilled work under sheltered conditions; needs supervision and guidance when under mild social or economic stress.
Severe	Poor motor development; speech is minimal; generally unable to profit from training in self-help; little or no communication skills.	Can talk or learn to communicate; can be trained in elemental health habits; profits from systematic habit training.	May contribute partially to self-maintenance under complete supervision; can develop self-protection skills to a minimal useful level in controlled environment.
Profound	Gross retardation; minimal capacity for functioning in sensorimotor areas; needs nursing care.	Some motor development present; may respond to minimal or limited training in self-help.	Some motor and speech development; may achieve very limited self-care; needs nursing care.

This chart is adapted from one given in the U.S. Department of Health, Education, and Welfare's booklet, "The Problem of Mental Retardation".

PUBLIC SCHOOL SPECIAL EDUCATION CLASSES FOR MENTALLY RETARDED
(TABLES IX THROUGH XII)

The latest data at the time of the compilation of this publication were figures on school enrollments for the 1972-73 School Year. We have estimated that in the State of Indiana there are 43,699 educable mentally retarded school-age children; yet there were only 15,849 educable mentally retarded students enrolled in public school special education classes - 36% of the need. We assume that most of the more than 27,850 educable children not enrolled were in attendance in regular classes, even though the curriculum in these classes might not be appropriate for the majority of them. A larger percentage - 77% - though a smaller number of the trainable mentally retarded children were being served in public school special education trainable classes. Of an estimated 2,948 trainable mentally retarded school-age children, 2,284 were enrolled in trainable classes. Approximately 660 will still need to be taken up by the public schools and take advantage of their right to free public school education.

A graphic illustration of the unequal treatment of educable and trainable school-age mentally retarded children from county to county is shown in Table X. Although the average statewide enrollment of these children is at the ratio of 11.28 mentally retarded children per 1,000 children, Bartholomew County had 2[illegible].38 enrolled, and two counties had not a single mentally retarded child in a public school special education program! The figures used in these tables represent school age children for which reimbursement was sought by local school systems through the Division of Special Education of the Department of Public Instruction.

VOCATIONAL REHABILITATION SERVICES
TABLE XIII

Table XIII gives information for the 1973 Fiscal Year on the caseload and closures of the Indiana Rehabilitation Services to the adult mentally retarded in relationship to all other disabilities. Nearly 21.4% of the caseload of Indiana Rehabilitation Services, or 2,134 out of 19,305 cases, were mentally retarded. And 19.2% of the closures, or 663 out of 3,445, were mentally retarded adults. The figures in this table represent information supplied to us by Indiana Rehabilitation Services.

SERVICES OF LOCAL ORGANIZATIONS FOR THE MENTALLY RETARDED
(TABLES XIV THROUGH XVI)

These tables are based on a review of the types of non-public school services given as of July 1973, and the various sources of funding which we have been able to ascertain on the basis of a survey taken in that same month. Three major sources of funding are delineated here: State funding which is disbursed through the Division on Mental Retardation of the Indiana Department of Mental Health; County support derived through permissive taxation legislation; and United Fund support at the local level. Information has been furnished to IARC by local programs serving the mentally retarded.

STATE HOSPITALS AND TRAINING CENTERS
(TABLES XVII THROUGH XIX)

In these three tables we have tried to identify the number of mentally retarded individuals in our State Hospitals and Training Centers. The first two tables compare enrollment of patients and movement of patients for each of the past two years for comparison purposes. The last table identifies the enrollment of patients as of June 30, 1973, on the basis of their county of residence. Data supplied by the Department of Mental Health.

* *

FOR FURTHER INFORMATION ON MENTAL RETARDATION do not hesitate to call upon the Indiana Association for Retarded Children. We will do all we can to provide you with as current and comprehensive facts as you may require. It is our sincere hope that this publication of "Statistics on Mental Retardation in Indiana" will be a handy and much-used resource for all who have the responsibility to plan, administer, and interpret programs for the mentally retarded in their own community, county, region, or for the State as a whole.

Frank E. Ball, Executive Director
